

NWT Centre for Geomatics Account Creation and Software Installation for GIS Users

First name:	Last Name:	Middle initial:
Job title:	Position type:	Supervisor's name:
Department:	Division/Unit:	Community name:

Have you previously had GIS access (software/enterprise geodatabase) within GNWT?

Yes No

Experience level with GIS: Beginner Intermediate Advanced

We do not provide GIS/ESRI training, users are expected to have some basic GIS training. We can provide access to additional ESRI training on their website with our licencing

Do you want to participate in the GNWT Geomatics Users group Yes No

The Geomatics Users group (GUM) includes periodic emails about data changes, impacts to viewers, training opportunities and invitations to approx. 3 meetings/year to see what other GNWT GIS users are doing

SOFTWARE:

Do you need GIS software installed on your computer? Yes No

If Yes, If 'other' please specify

GEODATABASE:

Do you require a connection to the enterprise geodatabase (GeoProd)? Yes No
Users are given viewer access to GeoProd unless otherwise specified:

Geoprod is a library of geographic datasets/layers in and around the NWT, that is the central location GNWT users should use in ArcMap/ArcPro to access data instead of holding local copies.

ArcGIS Online (AGOL):

Do you require an ArcGIS Online (AGOL) account? Yes No

What will you be using the AGOL account for? (this will help determine what type of licencing is required):

Are there any AGOL groups you are currently aware of that you should be part of:

AGOL is a cloud platform to create simple interactive map applications. There are security and privacy considerations to be explored with NWTCCG before content can be shared.

Please have your supervisor email the form to GeoNWT@gov.nt.ca.

Be aware that while licencing is not charged back to users, there is still a cost to the GNWT. If you are unsure if you require GIS software, access, or lack the knowledge to use it, but still need GIS work done, please contact us to discuss your situation and we can find the best solution for you.
